

Course: Administrating BusPlanner

Duration: 1 day

Overview

Administrative staff often have different responsibilities than those of BusPlanner users and are required to know how a BusPlanner environment operates on the server level. This course is designed to introduce administrators and information technology support staff to the BusPlanner operational environment. This course provides information at the server level and discusses proper maintenance practices. During this course, students will learn the database conversion process using GeoConverter, managing the Spatial Server. Students will also be taught how to operate and administer the automatic student update process and learn the proper use of the purpose and use of the administration tools including basic street editing. This course often includes several “see-and-do” components and may be taught using your live installation.

Goals

- Understand the overall BusPlanner operating environment
- Review software installation details and specifics
- Learn how to manage the Spatial Server
- Learn the use of the GeoConverter
- Understand the student update process
- Learn the use and purpose of the administration tools
- Learn basic street editing techniques

Audience

This course is designed for those individuals that are new to working with BusPlanner whose mandate will be to administrate and/or provide technical support to the planning staff.

Prerequisites and recommendations

Administrator training does not require any prerequisites. Students are expected to be comfortable with file system management. Optimally, students should understand database administration concepts and have an understanding of the basics of network communication.

Registration Information

Registrations are processed on a first-come, first-served basis. We recommend that you register at least 1 month prior to the date of your class. Class sizes are limited for optimal instructor-student interaction.
