

Going Deeper with BusPlanner

Duration: 1 day

Overview

Route planning is a vital part of student transportation management. To maximize your software investment, it is crucial that planners understand the route planning tools in BusPlanner Pro, and how to effectively use them.

Designed to follow our “Introduction to BusPlanner” course, “Going Deeper with BusPlanner” builds on – and solidifies – your initial knowledge of BusPlanner Pro. If you’ve learned the basics of Pro but need to take your routing skills to the next level, this is the course for you.

Note: *This course is designed to replace the previous “Mastering Route Planning Techniques” and “Advanced Route Planning Techniques” courses.*

Goals

- Manage your bus stop and run network effectively
- Learn to route students and edit runs via the map
- Master run/route path and time editing
- Understand your student update results
- Develop best practices for verifying and cleaning your data

Audience

This course is designed for BusPlanner Pro users (especially route planners) who have learned the basics of BusPlanner Pro, but want to practice and entrench their BusPlanner skills while learning best practices for their own environments.

Prerequisites and Recommendations

Students should have completed “Introduction to BusPlanner” and ideally have at least one month of experience actively using BusPlanner.
