

## Becoming a BusPlanner Power User

Duration: 1 day

### Overview

This advanced routing course takes the lessons learned in “Going Deeper with BusPlanner”, and brings them to the next level – giving you the skills you need to become a true “power user” in BusPlanner Pro.

If you’ve already taken “Going Deeper with BusPlanner” – or its predecessor, “Mastering Route Planning Techniques” – this course will prepare you to handle diverse and complex routing scenarios, minimizing data issues and making you the “go-to” person in your office for BusPlanner knowledge.

### Goals

- Work with run variations and student schedules
- Manage transfer stops between runs
- Build and manage seating charts in Pro and Web
- Understand effective/retire dates and route changes
- Learn to edit street segments and work with locations

### Audience

This course is designed for BusPlanner Pro users who are fully comfortable using BusPlanner for day-to-day routing, but want to take their knowledge from “good to great” and understand how the “advanced” routing tools in Pro fit together.

### Prerequisites and Recommendations

Students should have completed “Going Deeper with BusPlanner”, “Mastering Route Planning Techniques”, or “Advanced Route Planning Techniques”, and ideally have at least six months of experience actively using BusPlanner.
