

Introduction to BusPlanner GPS

Duration: 1/2 day

Overview

This half-day course introduces attendees to both the BusPlanner GPS Module and GPS technology overall. This session is intended for anyone who works with GPS data in BusPlanner on a regular basis, and is interested in mastering the details of how to manage their solution.

Goals

Topics covered in this course include:

- How GPS hardware works
- Understanding your data
- BusPlanner's GPS analysis tools
- Using the Speed Tuner to its full potential

Audience

This course is intended for users of the BusPlanner GPS module, or for any managers, administrators, or routing staff seeking to understand how your GPS data affects your organization.

Prerequisites and recommendations

Attendees should have completed "Introduction to BusPlanner", and have purchased the BusPlanner GPS module.
