

Mastering Route Planning Techniques

Duration: 1-2 days

Overview

Route planning is a vital part of student transportation management. To maximize your software investment, it is crucial that planners have a full understanding of the route planning tools in BusPlanner Pro and how to effectively use them.

This course is designed to build upon your introductory knowledge of BusPlanner Pro and sharpen your route planning skills. In the course, you will proceed to the “next level” of route planning, learn the fundamentals of map management, and learn how to find and clean up inconsistencies in your data – before others find them first.

Goals

- Manage your runs and routes more efficiently & effectively
- Update your street properties for more accurate routes and safer students
- Stay on top of incoming student updates from your SIS
- Keep your data clean and accurate as changes occur

Audience

This course is designed for BusPlanner Pro users (especially route planners) who want to further their understanding and gain efficiencies in the route planning process. It is also a good “refresher” course for technicians who want to ensure they are using the newest features of the software effectively in their planning activities.

Prerequisites and Recommendations

Students should have completed “Introduction to BusPlanner” and ideally have at least 4 months of experience actively using BusPlanner.
